

Principal Operational Technology Consultants

Background to DGA Consulting

DGA Consulting is a specialist operational technology and management consulting company consisting of talented and experienced professionals who collaborate to solve client challenges in the energy utilities sectors.

With a successful track record and a growing reputation in our market, we are keen to expand our coverage and recruit additional consultants to assist us in the delivery of our services and to grow our client base in the operational technology sphere.

Why Join DGA Consulting

DGA Consulting was set up to allow employees to achieve a positive work life balance and to move away from the constant pressure of short term targets applied in large corporate environments. We have developed a culture based on working within a collegiate environment where collaboration, respect, integrity and high-quality work is valued.

We offer the following benefits from working with the company:

- The opportunity to work on challenging projects within Australia and throughout the world and operate with a high level of independence
- Working from home (as well as at client sites) enables a friendly and enjoyable workplace, where quality outcomes are more important than corporate processes
- A team-oriented environment where talented people collaborate to achieve the best results for our clients
- Competitive remuneration package with bonuses for good company performance
- Option for future ownership in the business for successful and proven employees

Role Requirements

DGA Consulting wishes to identify suitable candidates for roles as Principal OT Consultants. Successful candidates will be required to perform a broad range of functions within the business including:

- Consulting services in OT project design, procurement and implementation
- Provision of specific advice on the best use of operational technology to improve utility operations
- Development of proposals (including technical and commercial aspects)
- Client meetings and sales presentations
- Participation at relevant industry conferences / events
- Development of quality documentation to support DGA's services

The role will be home-office based and can be located in most major Australian cities. The DGA team is geographically dispersed and largely operates utilising remote interactions.

Candidate Requirements

Candidates would ideally have fifteen years of overall experience in the energy utilities sector, and ten years of experience with OT systems and their associated environments.

Key skills and experience required include:

- Experience in the planning, design, procurement, implementation and operation of OT Systems including:
 - gathering of business requirements,
 - development of technical specifications,
 - development of commercial / contractual tender documentation, and
 - evaluation of tenders and the management of ensuing projects
- Extensive experience in proposing and delivering strategic and operational advice to senior utility executives
- Good facilitation and advisory skills in the delivery of consulting projects
- Degree qualified in Electrical Engineering or allied technical discipline
- Familiarity with energy utility operating practices and standards
- Strong verbal, written and presentation skills
- A willingness to travel interstate and overseas as project assignments may dictate
- Self-starter able to perform with a high level of autonomy
- The ability to work in a collegiate environment, giving and receiving support from other DGA members
- Australian citizen or permanent resident

Desirable skills and experience include:

- Existing relationships within the utilities sector
- Deep knowledge of utility sector trends and emerging markets particularly around the impact of renewables and the transition to bidirectional generation
- An understanding of energy market rules and regulatory conditions

Application Process
